

OpenComm — slot booking for art commissions

Scalable Software Engineering · Universitas Gadjah Mada · Semester Ganjil 2026/2027

Team OpenComm

Thomas Nadandra Aryawida (24/536628/PA/22760) · Ryan Ethan Halim (24/536718/PA/22765) · Muhammad Asthar Bin Rizwan (24/546649/PA/23208)

THE APP

Independent illustrators take paid commissions in rounds called **open comm**. An artist announces a period (say October) and a small number of **slots**. Most run this today on a Google Form, DMs and a spreadsheet, and that setup breaks at the worst moment: when a popular artist posts “OPEN COMM, 5 SLOTS”, hundreds of followers reply in the same minute. The artist ends up with more takers than slots, has to apologise and refund, then spends the month tracking who paid the **DP** (deposit), which sketch is waiting on approval, and who still owes **pelunasan** (the balance). OpenComm gives each artist a booking page for their window that never oversells, and tracks every commission from request to final file.

WHO USES IT

- **Artist** — opens windows, sets prices and terms, accepts or declines requests, delivers sketch and final. Cares about never being overbooked, getting the DP before starting work, and a capped number of revisions.
- **Client** — requests a slot, pays DP and pelunasan, approves the sketch, receives the file. Cares about a fair first-come slot, knowing the price up front, and seeing progress.

THE MAIN FLOW

1. The artist publishes a pricelist and opens a window with N slots.
2. A client requests a slot with a brief. One slot is **kept** for them. When none are left, the answer is “slots full”.
3. The artist accepts (quoting at or above the start-from price) or declines. Declining frees the slot.
4. The client pays the DP within 1×24 hours. The slot becomes **taken** and the commission joins the artist’s queue. If the DP is late, the slot is freed.
5. The artist sends a sketch. The client approves it or asks for a revision, up to the agreed limit.
6. The artist sends the final preview; the client pays pelunasan.
7. Once that payment is confirmed, the hi-res file is released and the commission is complete.

Shape: **reserve a scarce thing** (steps 1–4) followed by **order, prepare, hand over** (steps 4–7). It crosses three areas of the business — booking, payments, and the studio.

THE HARD RULE

An artist never gets more commissions in a window than the slots they opened, even when hundreds of clients press *Request* in the same second.

The load is bursty and self-inflicted: an artist posts the link to tens of thousands of followers at an announced hour, so a five-slot window takes hundreds of concurrent requests inside the first minute and almost none afterwards. A second rule carries the same weight — a payment is applied exactly once, even if the provider’s callback arrives twice.

WHY THIS IS NOT A MARKETPLACE (R4)

There is no artist discovery, search, ranking, reviews, chat, escrow or dispute handling. Each artist shares a link to their own window on their own social media. Supporting more artists means more tenants, not a catalogue to browse. We do not process images either: sketches and finals are links, and watermarking stays with the artist.

WHO WE WILL INTERVIEW

[name], an illustrator who has run [N] open-comm rounds on [platform] ([handle]). They have agreed to a 20-minute interview on [date] and to join our 90-minute event-storming session on [date].

DRAFT — amber fields must be filled before submission. Repository: github.com/Troggz/Scalable---Group-Assignment
